wild indigo, prickly dianthus

Pectin content - firewise landscaping

Landscaping Zones
Anything on your property that can burn is potential fuel for a wildfire.

Zone 1: 0-5' from your home, use Firewise plants only	Zone 2: 5-30' from your home, reduce combustibility	Zone 3: 30+ ft from your home, thin and prune existing plants
--	--	---

Remember these plants, animals or from your home. If it's located on a hill, remember fire will travel faster uphill toward your property.
